

MBA Course Descriptions

A. Foundation Courses (11 units)

Benedictine Spirituality 1 (1 unit) The course aims to introduce the students to the Life and Miracles of St. Benedict and Monastic of the Benedictines. The course surveys the history and spirituality of Christian Monasticism. It consists mainly of the spiritual journey of St. Benedict manifested in his life, the miracles he performed and the Rule he wrote for the monks.

Benedictine Spirituality 2 (1 unit)

□□□□

The course aims to introduce the students to Benedictine Principles that are needed in today's professional life. The course lays down selected Benedictine themes as humility, stewardship, accountability, responsibility, etc. that would imbibe among Bedan Professionals their Benedictine Character.

Business Research (3 units)

□□□□

This course deals with the basic knowledge and skills to undertake, present, and evaluate research concerning management problems of for-profit and not-for-profit organizations. It includes research strategies, sources of information, organization of materials, and tools/techniques of business research. The general framework of research integrates Lonergan's basic principles of the dynamic structure of human knowing with business research process, functions of theory in research, and ethics in business research.

It provides a comprehensive coverage of the business research process so that appropriate research strategies can be formulated to help managers make better decisions. The culmination of this course is the preparation and oral defense of an Individual Thesis Proposal or Corporate Plan (Strategic Management) Proposal. The course uses a hybrid approach balancing theory and application through workplace-based live cases involving the real-time involvement of the students in applying classroom theory in their respective work environment/ Experiential learning developed is thus achieved gradually for every topic and integrated in the entire course.

Managerial Statistics

(3 units)

□□□□

This course will deal with the intensive study of the use of statistics in management and decision-making. It touches on the core statistical tools such as population and sampling, descriptive statistics, measure of variability, hypothesis testing, ANOVA and regression analysis.

The course aims to equip the students with the necessary basic statistical knowledge expected of a business student. It will emphasize a thorough understanding of the different statistical methods and techniques that are popularly used in the business field. Topics in the course include both descriptive and inferential statistics like measures of central tendency, measures of variability, measures of skewness and kurtosis, normal curve, probability, permutation, and combination, probability distributions, hypothesis testing, analysis of variance, simple correlation linear and multiple regression, nonparametric tests and analysis of covariance.

Managerial Accounting and Control

(3 units)

□□□□

The course explores the uses of accounting for effective management and decision-making and discusses the basic concepts of controllership as they relate to management information needs for planning and control. The course provides the students adequate knowledge of accounting and desirable analytical tools used in managing business.

The topics include a review of financial accounting processes and techniques, analysis of financial statements, cost concepts, methods and systems, the use and analysis of cost data for decision-making, evaluation of performance, responsibility accounting, short- and long-term managerial decisions, capital budgeting, and basic concepts of controllership. Emphasis is given to decision-making, its ethical implications, and its impact on business and national development.

B. Core Courses (21/24 units)

Managerial Economics (3 units) □□□□□ This course deals with the use of economics as a tool for managerial decision making. It considers different forms of competitive economic behavior, various uses of cost analysis, business forecasting, demand analysis, pricing

decisions, location and capital budgeting, and the impact of monetary and fiscal policy on businesses. **Financial Management (3 units)**

□□□□

This will be an in-depth analysis of short and long term financial planning and management of the financial assets of the business. Emphasis is given to the understanding of key concepts in finance such as time value of money, capital budgeting, financial statement analysis, cash and inventory management and capital structure.

This is a graduate course for students who are being prepared for managerial positions in the field of finance. The course takes the students into an in-depth analysis of the financial performances of a business enterprise. It also equips financial performances of a business enterprise. It also equips students with tools and concepts on how to better manage corporate funds and liquidity; with special focus on financial decision-making. Topics include financial analysis, capital budgeting, debt-equity mix, sources of finance, dividend policy, working capital management and financial planning.

Human Resources Management (3 units)

Surveys at an advanced level the human resource field and its major components: job, and work design, HR planning, recruitment and selection of employees, training and development, performance appraisals, the compensation process, benefits, collective bargaining and negotiations, safety and health, and international human resources.

The course emphasizes the alignment of Human Resource Management practices and programs with the goals and strategies and values of the organization. It presents tools for analyzing strategic alignment and provides a fresh perspective on the role of HR and its function as change agent, and how in partnership with top management, one of the most critical sources of sustainable competitive advantage – an organization whose design, culture, and people are aligned with strategy and values – can be built.

Legal Aspects of Business (3 units)

This course covers the various legal aspects of doing business given the prevailing Philippine business environment and considering the country's commitments under relevant international treaties and agreements. The course explores the conformity of business decisions with pertinent provisions of the law, as well as decisions of the court on the matter.

The course focuses on the basics of commercial law, rather than on intricate legal concepts and procedure. It explores issues and concerns related to human resources (Labor Code), material assets (Insurance Code), and the Law of Damages arising from a breach of contract. It looks at the fundamentals of the Corporate Code, Partnership Law, Cooperative Law, and Trademarks, Trade Names and Patent Law.

Marketing Management

(3 units)

This course is on the development of a marketing strategy for profit, whether public and non-profit organizations. The course will have as its focal concern the interplay and impact of the marketing mix on the development of plans of action of companies.

The course presents a strategic overview of the Marketing discipline. It provides an analytical framework that facilitates a systems-oriented and values-centered understanding of the subject. Course participants learn advanced assessment techniques of internal and external environments: organizations, processes, consumers, markets as well as competition in an organized approach at determining both market risks and opportunities. Governance aspects including practical elements in professional ethics and corporate social responsibility of the Marketing Profession are specially contemplated.

Focused discussions of fundamental Marketing Management concepts, especially the Marketing Mix, are accentuated by relating to real life situations in both contemporary local and global setting. Methodology is decidedly interactive not limited to structured classroom lectures but exploring alternative arrangements including self-assessment and dyadic exercises, market research, case study, role play, scanning trips, workshops, and other team inspired activities. Contributions from benchmark industry leaders and professional market practitioners highlight selected thematic sessions.

Production/Operations Management

(3 units)

This introduces production and operations as functional areas of management and its linkages with other functional areas of the firm. It includes acquisition and allocation of resources to support the production and delivery of goods and services and contemporary issues faced by managers like just in time, material requirement planning, total quality management, reengineering, productivity, and control costs.

The course is designed to provide students with the foundation of the basic operations and functions of manufacturing and service organizations. It covers comprehensive analysis of operations, from conversion of inputs (physical and non-physical) into finished products and services and controlling the process with the use of quantitative tools and techniques from

strategic, tactical, and operational viewpoints. Production management creates customer value through attaining operational excellence (cost, quality, cycle time).

Strategic Management

(3 units)

□□□□

The course is the capstone course for the MBA Program. It involves the utilization of knowledge and skills acquired from the other MBA courses as well as their integration and application in the real world setting, following the strategic management framework. This integration course aims to immerse the students in the discipline of strategy formulation, implementation, and evaluation with the main benefit of providing their chosen companies a strategic and cut-tailored corporate roadmap for the attainment of their corporate vision, mission and business goals and objectives. Through this course, the students are expected to be equipped with relevant strategic management frameworks and knowledge for critical analysis of their firms' external and internal business environment and develop vital skills to formulate and implement empirically generated strategies resulting in the creation of sustainable competitive advantage for their firm, it also provides students the opportunity to apply the basic concepts and techniques learned from various functional areas of business management studies allowing them to develop, implement, and evaluate strategic cross-functional decisions. This course also aims to prescribe and encourage students to apply ethical business principles in making decisions and include corporate social responsibility as part of their corporate strategy.

Controllership

(3 units-non-thesis)

The course builds on the concepts, principles, and tools of controls learned in foundation and core courses. It focuses on the deepening of knowledge, application, and analysis of the role of controllership in organizations involving planning, controlling, and providing reliable information for corporate decision-making.

C. Electives (3/6 units)
